Application Overview

What the system does and who it is built for

Cost Analysis Per Container is a full-featured enterprise web application purpose-built for Nigerian port clearing and logistics companies. It centralises the entire lifecycle of a container clearing job — from the moment a container arrives at port to the moment it is physically delivered to the customer — tracking every cost, charge, document, approval, and invoice in one secure system.

Core Capabilities

- Track all clearing costs across five sections (Shipping, Customs, Terminal, Delivery, Operations) in Nigerian Naira (₦).
- Generate professional client invoices, record payments, and monitor outstanding receivables.
- Enforce a 10-stage workflow with section-level approval controls and full rejection/correction flow.
- Provide intelligence alerts to identify loss-making jobs, delayed containers, and unpaid customs duty.
- Manage client profiles, agreed fee schedules, and bulk data imports from Excel.
- Record physical delivery dates per container and generate delivery tracking reports.
- Maintain a complete, tamper-proof audit trail of every data change made in the system.
- Produce financial and operational reports exportable to Excel with print-ready layouts.

User Roles

The system has two roles:

ADMIN — Full access to all features. Creates users, approves sections, manages settings, creates invoices, sets delivery dates, accesses all financial analytics, and can view and edit everything in the system.

STAFF — Limited access. Works on assigned containers within permitted cost sections only. Submits sections for admin review. Cannot create invoices, access analytics, or view other users' work outside their permissions.

Technology

- Frontend: React (Vite), Tailwind CSS, shadcn/ui components.
- Backend: Node.js + Express 5, PostgreSQL database with Drizzle ORM.
- Authentication: JWT stored in secure httpOnly cookies.
- File handling: Excel/CSV imports, document uploads per container.
- WhatsApp integration: Click-to-send via wa.me links.

Getting Started

First-time setup, login, and navigation

First-Time Setup (Admin Account)

The setup page is only accessible when no accounts exist in the system. This is how you create your first admin account:

1. Navigate to /setup in your browser.
2. Fill in your full name, email address, and a secure password.
3. Click "Create Admin Account". You are immediately logged in.
4. The /setup page is permanently disabled after the first account is created.

Security Note

Only one admin account can be created via /setup. All subsequent users must be created by the admin from the User Management page (/users).

Logging In

1. Visit the application URL — you are redirected to the login page automatically.
2. Enter your email address and password.
3. Click "Sign In". On success you are taken to the Dashboard.
4. Your session is maintained via a secure cookie.
5. To log out, click your name at the bottom of the sidebar and select "Sign Out".

Sidebar Navigation

The left sidebar is the main navigation. It shows links to every section you have permission to access. Key elements:

- Your name and role badge (Admin or Staff) at the top.
- Notification bell with unread count badge — click to go to the Notifications page.
- All accessible page links.
- "Sign Out" button at the very bottom.

Tip for Staff

If a page is not visible in your sidebar, you have not been granted access to it. Contact your admin to request the necessary permissions.

Dashboard

Real-time business overview at a glance

The Dashboard is the home screen after login. It provides a full financial and operational snapshot without requiring you to visit individual records. It updates every time you visit.

KPI Summary Cards

Total Containers	Count of all container clearing jobs in the system.
In Progress	Containers currently being processed (not yet completed or closed).
Clearing Charges	Total revenue billed to clients across all containers (\$).
Total Cost	Sum of all costs across all five sections for every container (\$).
Gross Profit	Clearing Charges minus Total Cost. Green = profitable, Red = loss (\$).
Outstanding Receivables	Total amount still owed by clients on all unpaid invoices (\$).

Intelligence Alerts Beacon

A pulsing beacon button (top-right of the dashboard) blinks when new alerts exist. Clicking it opens a panel showing all active system alerts, sorted by severity:

- Critical (Red) — Loss-making containers: total cost exceeds clearing charges.
- Warning (Orange) — Low margin containers: profit is positive but below a healthy level.
- Warning (Amber) — Outstanding duty: unpaid customs duty on a container.
- Warning (Violet) — Stale approval: section submitted but not yet reviewed by admin.
- Warning (Rose) — Overdue task: a task is past its due date.
- Info (Blue) — Possible delay: container has been in the same stage too long.

Clicking any alert takes you directly to the relevant container. The beacon stops blinking once you open the panel.

Charts on the Dashboard

- Monthly Revenue vs. Cost Bar Chart: Compares revenue and cost for the past 6 months. Quickly shows which months were profitable.
- Receivables Aging Donut Chart: Breaks down outstanding balances by age (Current, 31–60d, 61–90d, 90+d).

Quick Container Search

The search bar at the bottom of the dashboard instantly finds containers by container number or BL number. Clicking a result opens that container's detail page directly.

Pending Actions

A panel shows tasks requiring your immediate attention — pending approvals for admins, or sections assigned to you for staff. Click any item to jump directly to it.

Pipeline — Kanban Workflow Board

Visual tracking of every active container

The Pipeline page (/pipeline) displays all active containers grouped by their current workflow stage in a visual column board. It is the fastest way to see where each job stands and spot bottlenecks.

The 10 Workflow Stages

1. Pre-Arrival	Container expected but not yet physically arrived at port.
2. Arrival	Container has arrived at the port.
3. Pre-Examination	Preparing for customs examination (documentation stage).
4. Examination	Under active customs inspection.
5. Assessment	Duty and charges are being assessed by customs authorities.
6. Duty Payment	Customs duty is being paid or arranged.
7. Terminal	Container is at the terminal awaiting collection.
8. Delivery	Container is being transported to the customer's location.
9. Completed	Clearing job is fully completed.
10. Closed	Job has been closed and archived.

Aging Badges on Cards

- No badge (less than 7 days in stage): Normal progress.
- Amber badge (7–14 days): Possible delay — monitor closely.
- Red badge (more than 14 days): Critical delay — requires immediate action.

Advancing Container Status

Admins can click the "Advance" button on any container card to move it to the next stage. This is recorded in the audit log. Staff members cannot advance stages — only admins have this permission.

Note

Completed and Closed containers are not shown on the Pipeline board. Access them from the Containers page (/containers).

Containers — Central Records

Managing all container clearing jobs

The Containers page (/containers) is the core of the application. Every container clearing job exists here as a record. From this page you create, search, filter, and manage all container jobs.

Container List Table

Each row in the list shows: Container Number, Customer Name, BL Number, Status Badge, Clearing Charges (£), Total Cost (£), Gross Profit (£), and an Aging Badge (days active, colour-coded at 30/60/90 days).

Searching & Filtering

- Search Box: Type any container number, BL number, or customer name. Updates in real-time.
- Status Filter: Show all or filter by a specific workflow stage.
- Profit Filter: Show all, or filter for "Loss-Making" and "Low Margin" containers only.
- Date Range: Filter by the date containers were created (From / To).
- Column Sorting: Click any column header to sort ascending or descending.
- Pagination: 15 containers per page. Navigate with Previous/Next buttons.

Creating a New Container

1. Click "New Container" (top-right of the Containers page).
2. Enter the Container Number, BL Number, and Customer Name (required).
3. Optionally set Vessel, Size, Assigned Staff, and Client link.
4. Set the Clearing Charges (£) if known at this point.
5. Click "Create Container". The container is created at Pre-Arrival stage.

Container Detail Page

Clicking any container row opens its full detail page. This page contains all financial data, documents, tasks, approval status, and the delivery date for this container clearing job.

The Five Cost Sections

Shipping Section

Records costs related to the shipping company: Shipping Payment VAT, Consignee, Final Invoice (Shipping Company), Telex Charge, Shipping Runnings, Shipping Detention.

Customs Section

Records government duties: Customs Duty, Customs Duty VAT, SON Levy, NAFDAC Fee, Processing Fee, and the "Duty Not Paid" field (amount still owed to customs).

Terminal Section

Records port terminal costs: THC (Terminal Handling Charge), SHIM Fee, Terminal Storage, Scanning Fee, Examiner Bribe, Terminal Runnings.

Delivery Section

Records haulage costs: Truck Hire, Escort Fee, Delivery Runnings, and other delivery-related costs.

Operations Section

Records internal overhead: Documentation Fee, Agency Commission, Staff Costs, Office Expenses, and other operational costs.

Automatic Cost Calculations

- Total Cost = sum of all individual line items across all five sections.
- Gross Profit = Clearing Charges minus Total Cost.
- Gross Margin % = (Gross Profit ÷ Clearing Charges) × 100.
- All figures recalculate automatically every time you save a section.

Duty Not Paid

The "Duty Not Paid" field in the Customs section tracks money owed to customs but not yet paid by the client. This appears on client statements and triggers overdue duty alerts.

Section Lock & Approval Workflow

Each cost section goes through a status lifecycle:

- Draft — staff can freely edit all fields.
- Submitted — staff has submitted the section. Fields are locked. An admin must review it.
- Approved — admin approved the submission. Section is permanently locked.
- Rejected — admin rejected with a reason. Section unlocks and a Correction Task is created for the staff member.

Container Header Editing

The top of the container detail page lets you edit: Container Number, BL Number, Customer Name, Client Link, Vessel, Size, Declaration Number, Assigned Staff, Current Status, and Clearing Charges (). Gross Profit is displayed prominently.

Document Uploads

- Upload any file type (PDF, images, Word, Excel) to each container.
- Files are labelled by document type for easy identification.
- Download any file at any time.
- Delete documents that are no longer needed.

The Upload page (/containers/upload) supports two modes:

- General Upload: Import container records from Excel without linking to a client.
- Customer-Linked Upload: Select a client first, then upload. All records are linked to that client automatically.

Audit Trail

Every change made to a container is permanently logged showing: what field changed, old and new values, who made the change, and when. This log cannot be edited or deleted.

Tasks per Container

- Admins create tasks with title, description, assignee, and due date.
- Tasks appear on the assigned staff member's My Tasks page.
- Rejected sections automatically generate a Correction Task for the submitting staff member.
- Overdue tasks trigger a notification alert.

Delivery Date Recording

- In the container detail, find the "Date Delivered" field.
- Click the pencil icon to enter or change the delivery date.
- Click × to clear a date entered in error.

- Containers backfilled from before this feature was added show an "Estimated" badge.
- Once you manually enter a date, the Estimated badge disappears.
- Delivery dates are used in the Delivery Tracking Report (Reports section).

Clients Management

Managing your customer database

The Clients page (/clients) is the customer relationship management section. Every client you do business with should be set up here so their containers can be linked, invoices generated, and their financial balances tracked.

Client Profile Fields

- Client Name
- Contact Person
- Email Address
- Phone Number (WhatsApp-friendly format recommended)
- Physical/Registered Address
- Internal Notes

Adding a Single Client

1. Click the "Add New Client" dropdown button.
2. Select "Add New Client" from the dropdown.
3. A dialog opens — fill in the client details.
4. Click "Create Client".

Bulk Client Upload

If you have many clients to add at once:

1. Click "Add New Client" ! "Bulk Upload (Excel/CSV)".
2. Download the template to see the required column format.
3. Fill in your client list: columns are CLIENT NAME, CONTACT PERSON, EMAIL, PHONE, ADDRESS, NOTES.
4. Upload the completed file in the dialog.
5. The system imports all valid rows and shows any errors before committing.

Download Client Template

Click "Add New Client" ! "Download Template" to get an Excel file with two example rows. Use this as your formatting guide for the bulk upload.

Client Card Information

Each client card shows: name and contact details, total container count, total outstanding balance, and a "View Statement" link to their full financial ledger.

Client Fee Schedule

From the client detail page, set agreed clearing rates. These default rates automatically fill in the Clearing Charges field on new containers linked to this client — saving time and ensuring consistency.

Deleting a Client

Deleting a client does not delete their containers. Existing containers become unlinked (the client field is cleared). Existing invoices retain the client name for historical accuracy.

Invoices & Billing

Creating invoices, recording payments, and printing

The Invoices page (/invoices) handles all client billing. You can generate single or multi-container invoices, track payment status, record partial and full payments, and print professionally formatted invoices.

Invoice Statuses

Draft	Created but not yet sent to client.
Sent	Dispatched to client, awaiting payment.
Partial	Client made a partial payment. Balance remains.
Paid	Fully settled. No outstanding balance.
Overdue	Past due date with outstanding balance.

Creating an Invoice

1. Click "New Invoice".
2. Select the client.
3. Search for and add the container(s). Multiple containers can be bundled into one invoice.
4. Review the automatically calculated totals (including VAT if applicable).
5. Set the due date.
6. Click "Create Invoice". Invoice is created in Draft status.
7. Change status to "Sent" once you dispatch the invoice to the client.

Recording a Payment

1. Open the invoice detail page.
2. Click "Record Payment".
3. Enter the amount received and payment date.
4. Click Save. Status updates automatically (Partial if partly paid, Paid if fully settled).
5. Multiple payments can be recorded against a single invoice.

Printing an Invoice

The "Print" button opens a clean, formatted print view showing company details, client details, all line items, totals, and payment history. Suitable for sending as PDF or printing on letterhead.

WhatsApp Invoice Sharing

Click "Send via WhatsApp" on any invoice to open WhatsApp (web or mobile app) with the client's phone number pre-filled and a message containing the invoice reference and amount outstanding.

Invoice Aging Badge

Overdue invoices show a badge indicating how many days past the due date they are. Invoices 30+ days overdue are highlighted in red for urgent follow-up.

Accounts Receivable (AR) Ledger

Monitoring and collecting outstanding payments

The Accounts Receivable page (/accounts-receivable) is a dedicated financial control centre for managing client debt. It provides a consolidated view of every outstanding balance across all clients, grouped by how long the debt has been outstanding.

AR Table Columns

- Client Name — click to view their full statement.
- Total Invoiced — sum of all invoice totals for this client (\$).
- Total Collected — sum of all payments received from this client (\$).
- Outstanding — amount still owed (\$).
- Current (0–30 days) — recently issued, not yet overdue.
- 31–60 Days — mildly overdue, follow-up recommended.
- 61–90 Days — significantly overdue, escalate collection.
- 90+ Days (red highlight) — critical risk of becoming uncollectable.

Expanding Client Rows

Click the arrow (⌵) next to any client to see their individual unpaid invoices. Each sub-row shows invoice number, status, total, amount paid, outstanding, and due date. Click any invoice number to open the invoice directly.

Summary Cards

- Total Outstanding — combined balance owed by all clients.
- Overdue 90+ Days — highest-risk portion of receivables.
- Clients with Balances — count of clients with unpaid invoices.
- Average Days Outstanding — average age of unpaid invoices.

Exporting the AR Ledger

Click "Export CSV" to download the full AR ledger as a CSV file. Compatible with Excel, Google Sheets, and accounting software. The export includes client names, totals, and all aging bucket values.

My Tasks

Personal task management for staff and admins

The My Tasks page (/my-tasks) is personalised to the logged-in user. It shows everything you need to act on today — assigned containers, correction tasks from rejected submissions, and containers awaiting your input.

For Staff Users

- Assigned Containers: All containers where you have been set as the responsible person.
- Section Status Per Container: Draft, Submitted, Approved, or Rejected for each of your five sections.
- Correction Tasks: When an admin rejects your section submission, a correction task appears here with the specific rejection reason so you know exactly what to fix.
- Task Due Dates: Tasks with deadlines are shown. Overdue tasks are highlighted in red.

For Admin Users

- Container Review Queue: Containers with sections waiting for your approval.
- Pending Section Count: How many submissions are awaiting review across all containers.
- Quick Navigation: Click any item to jump directly to the approval screen.

Daily Habit for Staff

Check My Tasks at the start of each workday to see if any sections have been rejected and require correction before re-submission.

Approval Queue

Admin review and approval of submitted cost sections

The Approvals page (/approvals) is where admins review data entries submitted by staff. This workflow enforces data accuracy before any cost section is permanently locked on a container.

The Full Approval Workflow

1. Staff fills in a cost section (e.g., Shipping) on a container.
2. Staff clicks "Submit for Review". Section status changes to "Submitted". Fields are locked.
3. An alert appears on the admin's dashboard and in the Approval Queue.
4. Admin opens the Approval Queue, finds the submission, and clicks "Review".
5. Admin reads all the field values to verify accuracy.
6. Admin clicks APPROVE — section is permanently locked; OR clicks REJECT — must enter a rejection reason.
7. If rejected: staff receives a Correction Task and can re-edit and re-submit.
8. Once all five sections of a container are Approved, the admin can mark the container Completed.

Approving a Section

1. Click "Review" on the pending submission.
2. The section opens in read-only view showing all entered values.
3. Click "Approve".
4. Section status changes to Approved with a permanent green checkmark.

Rejecting a Section

1. Click "Review" on the pending submission.
2. Click "Reject".
3. Enter the rejection reason in the dialog (required — cannot be blank).
4. Click "Confirm Rejection". Section returns to Draft and unlocks for editing.
5. A Correction Task is automatically sent to the submitting staff member.

Analytics

Business intelligence and financial performance

The Analytics page (/analytics) provides high-level strategic charts and statistics. Unlike the Dashboard (operational), Analytics helps you understand long-term profitability trends, best and worst customers, and staff performance patterns.

Summary KPIs

- Total Clearing Revenue (£) — cumulative clearing charges.
- Total Costs (£) — cumulative costs.
- Total Gross Profit (£) — colour-coded (green = profit, red = loss).
- Total Containers and Total Clients counts.
- Total Duty Not Paid — outstanding customs duty balance across all containers.

Charts & Visualisations

Revenue vs. Cost by Month (Bar Chart)

Compares total revenue against total cost for each of the past months. Immediately shows which months were profitable and which months costs exceeded revenue.

Cost Breakdown by Section (Pie Chart)

Shows the percentage of total costs from each section (Shipping, Customs, Terminal, Delivery, Operations). Identifies which cost category is the largest driver of your total spend.

Profit by Customer (Bar Chart)

Ranks all clients by gross profit generated. Identifies your most and least profitable customers. Clients consistently in negative territory may need fee renegotiation.

Profit by Vessel (Bar Chart)

Groups containers by vessel/ship to identify if certain vessels or shipping lines consistently result in higher costs.

Monthly Trend Line

A smooth line chart of gross profit over time. A downward trend signals rising costs or falling revenue requiring strategic attention.

Loss-Making Containers Table

Lists every container with a negative gross profit and the loss amount. This is your immediate action list for cost recovery.

Staff Productivity Table

Tracks each staff member's performance metrics:

- Containers Assigned — how many containers they are responsible for.
- Sections Submitted — total section submissions made.
- Sections Approved — submissions approved on first review.
- Sections Rejected — submissions returned for correction.
- First-Pass Approval Rate — percentage approved without rejection (data quality measure).

Reports & Print Exports

Generating operational and financial reports

The Reports page (/reports) generates on-demand reports filtered by client, date range, status, and other criteria. All reports can be exported to Excel or printed in a professional, clean format.

How to Generate a Report

1. Navigate to /reports.
2. Select the report type using the tabs at the top of the page.
3. Apply your filters (date range, client, status).
4. Click "Generate Report".
5. The report table loads with summary statistics.
6. Use "Export to Excel" to download, or "Print Report" to open the print view.

Container / Operations Report

The primary operations report. Filters by date range, status, client, and view:

- Main View: All containers with financials (revenue, cost, profit, per-section costs).
- Vessel Summary: Containers grouped by vessel with totals per vessel.
- Container Size Summary: Grouped by TEU size (20ft, 40ft, etc.) with totals.
- Summary row: total revenue, total cost, gross profit, average margin.

Financial Monthly Summary Report

Groups all container financials by calendar month. Each row shows: month, container count, total revenue, total cost, and gross profit. Use for management accounts and month-on-month trend analysis.

VAT Summary Report

Extracts all VAT-related charges (shipping VAT, customs duty VAT). Shows total VAT collected and paid. Filter by date range to match your VAT filing period. Essential for tax compliance reporting.

Invoice Aging Report

Lists all outstanding invoices grouped by aging bucket (0–30, 31–60, 61–90, 90+ days). Filter by client. Use for debt collection follow-up and credit review meetings.

Delivery Tracking Report

Specifically tracks containers that have been physically delivered to customers. Filter by delivery date range. Shows:

- Total containers delivered in the period.
- Total revenue from those deliveries (!).
- Average days from job creation to delivery.
- Per-container breakdown: Container Number, BL Number, Client, Status, Clearing Charges (!), Delivery Date, Days to Complete, Estimated flag (if date was auto-calculated).

Print View

Click "Print Report" to open /reports/delivery-report/print — a print-optimised page with no navigation, clean white background, and a timestamp. Suitable for saving as PDF or printing on paper.

Exporting to Excel

Every report has an "Export to Excel (.xlsx)" button. The file is formatted for easy reading and is compatible with Excel, Google Sheets, and accounting software. Includes all filtered rows and columns.

Notifications

Full audit log of all system-generated alerts

The Notifications page (/notifications) provides the complete history of all system-generated alerts with filtering options. Unlike the Dashboard beacon (a quick glance), this page lets you review, filter, and action any alert in detail.

All Notification Types

Alert Type	Description	Severity
Negative Profit	Container total cost exceeds clearing charges — a financial loss.	Critical
Low Profit Margin	Gross profit positive but margin is below a healthy threshold.	Warning
High Terminal Cost	Terminal costs abnormally high for this container.	Warning
High Delivery Cost	Delivery costs abnormally high for this container.	Warning
Unpaid Duty	Customs duty recorded as not yet paid on this container.	Warning
Delayed Container	Container stuck in its stage longer than expected.	Info
Clearing Delay (30d)	Container has been in progress for 30+ days.	Warning
Long Delay (60d)	Container has been in progress for 60+ days.	Warning
Critical Delay (90d)	Container has been in progress for 90+ days without completion.	Critical
No Activity	No changes made to container in the configured inactivity period.	Info
Overdue Task	A staff task has passed its due date without being marked complete	Warning
Stale Approval	Section submitted for review but not actioned by admin in several days	Warning
Section Rejected	Admin has rejected a submitted section and sent it back for correction.	Warning

Filtering Notifications

- Status: All, Unread, or Read.
- Type: All types or a specific alert type.
- Severity: All, Critical, Warning, or Info.

Mark as Read

- Viewing the page marks all currently visible notifications as viewed after a short delay.
- "Mark All as Read" button instantly marks everything as read.
- Unread notifications show a blue dot. Read notifications appear at 60% opacity.

Sidebar Badge

The bell icon in the sidebar shows the unread notification count. It updates in real time. When all notifications are read, the badge disappears automatically.

User Management & Permissions

Creating users and controlling their access

The User Management page (/users) is admin-only. It controls who can log in and exactly what they can see and do. A granular, section-level permission system gives fine-grained access control per user.

Creating a New User

1. Click "Add User".
2. Enter the user's full name, email address, role (Admin or Staff), and an initial password.
3. For Staff users, configure their section permissions (see below).
4. Click "Create User". The user can now log in with the credentials you set.

Password Policy

Initial passwords must meet minimum complexity requirements. Users should change their password on first login. Contact your system admin if you need a password reset.

Section Permissions for Staff

For each staff user you can control access to each of the five cost sections:

- No Access — the section is hidden from this staff member entirely.
- View Only — the staff member can see all field values but cannot change anything.
- Edit — the staff member can enter and modify data and submit sections for review.

Example: A staff member responsible only for terminal operations can be given Edit access on Terminal and View Only on Shipping, with no access to Customs, Delivery, or Operations.

Activating & Deactivating Users

Rather than permanently deleting a user (which would erase their audit trail history), deactivate them using the toggle switch next to their name. A deactivated user cannot log in. All their past data and audit entries remain intact.

Custom Section Builder

Admins can create custom data sections beyond the five standard ones. Custom sections follow the same permission and approval workflow as standard sections, allowing you to capture company-specific data fields.

Settings

System-wide configuration and alert thresholds

The Settings page (/settings) is admin-only and controls how the system generates aging alerts, configures inactivity warnings, and sets up email digest notifications.

Alert Thresholds

- Inactivity Days: Days of no changes to a container before a "No Activity" alert is raised. Default: 7 days.
- Warning Threshold (Days 1): Days before the first aging warning is raised. Default: 30 days.
- High Warning Threshold (Days 2): Days before an elevated aging warning. Default: 60 days.
- Critical Alert Threshold (Days 3): Days before the most urgent aging alert. Default: 90 days.

Validation Rule

Days 1 must be less than Days 2, and Days 2 must be less than Days 3. The Save button stays disabled if values are invalid.

Email Digest

- Toggle on/off using the switch.
- Set the recipient email address for alert summaries.
- Use "Send Test Digest" to immediately send a test email and confirm the integration is working.

Email Setup

Email delivery requires a `RESEND_API_KEY` environment variable to be configured by the system administrator. Without it, settings can be saved but no emails will be sent.

Saving Settings

Click "Save Changes" after making any modification. The system validates all values before saving. A toast message confirms success. Settings take effect immediately — no restart required.

Glossary of Terms

Key definitions used throughout the application

Term	Definition
AR (Accounts Receivable)	Money owed to your company by clients — total unpaid invoice balances.
BL Number	Bill of Lading Number — the unique reference for the shipping contract.
Clearing Charges	The fee charged to the client for container clearing services ().
Container Number	Unique shipping container ID (e.g., MSCU1234567).
Duty Not Paid	Customs duty assessed but not yet paid by the client. A liability on your books.
Gross Profit	Clearing Charges minus Total Cost. Positive = profitable, Negative = loss.
THC	Terminal Handling Charge — a fee charged by the port terminal for handling containers
Total Cost	Sum of all five sections: Shipping + Customs + Terminal + Delivery + Operations.
VAT	Value Added Tax — currently 7.5% in Nigeria on applicable services.
Vessel	The ship carrying the container.
Workflow Stage	One of the 10 stages a container moves through from Pre-Arrival to Closed.
Aging	How long something has been outstanding — applied to containers, invoices, and receivables
Audit Trail	A permanent, tamper-proof log of every change made to a record in the system.
Section	One of the five cost categories: Shipping, Customs, Terminal, Delivery, or Operations
Estimated Date	A delivery date automatically calculated (not manually entered). Shown with "Estimated" badge
Pipeline	The visual Kanban board showing active containers grouped by workflow stage.
Approval Queue	List of submitted sections waiting for admin review.
First-Pass Rate	Percentage of section submissions approved without rejection — a data quality metric
KPI	Key Performance Indicator — a measurable value showing how effectively objectives are met.

Cost Analysis Per Container — Enterprise Logistics Management

For technical support, contact your system administrator.
